

All LAMI GRP door types can be specified with optional built-in antimicrobial protection to inhibit the growth of a broad range of bacteria.

- As the antimicrobial ingredient is built directly into the doorleaf's surface material and it is not water soluble, the protection will not wash or wear off.
- The antimicrobial ingredient inhibits the growth of a broad range of bacteria, mould and mildew.
- The protection works by neutralising the ability of organisms to function, grow or reproduce.
- The antimicrobial protection is more than a surface coating or a temporary treatment.
- The doorsets with antimicrobial properties provide further protection against contamination between cleaning periods.
- The antimicrobial ingredient used is safe and effective. It has been used in medical, commercial and consumer products for over 25 years.
